
FOR IMMEDIATE RELEASE

Sif announces the award for the production of all tubular components for the jacket of the BorWin gamma platform

**ROERMOND
THE NETHERLANDS
10 AUGUST 2016**

Sif Holding N.V. (“Sif or “the Company”), a leading manufacturer of large steel tubulars which are used as foundation components for the offshore wind and offshore oil & gas markets, announces today that it has been awarded a contract for the production of legs, bracings, pile sleeves and pin piles for the jacket of the BorWin gamma platform.

The project is being undertaken by Petrofac in consortium with Siemens for the German-Dutch transmission grid operator TenneT. The jacket for the BorWin gamma platform will be built by Heerema Fabrication Group and will house a Siemens HVDC station that will convert the alternating current produced by the offshore wind turbines to direct current before transmitting it onshore to the German high voltage grid.

The total volume of the tubulars for the platform amounts to approximately 8.6 ktons and production is planned in the last quarter of 2016 and the first half year of 2017.

ABOUT SIF HOLDING N.V.

Sif is a leading manufacturer of large steel tubulars which are used as foundation components for the offshore wind and offshore oil & gas markets. The Company manufactures customised tubular components for offshore foundations, predominantly in the greater North Sea region. Sif combines a highly automated and flexible production facility with technology leadership in rolling and welding of heavy steel plates which is based on over 65 years of experience and innovative in-house developed techniques and processes. Sif primarily produces monopiles, transition pieces and piles that are used to anchor jacket foundations in the seabed for offshore wind turbines, as well as legs, pile sleeves and piles of the larger jackets for oil & gas as well as tubular structures for various uses such as jetties.
